

IAQ Home Survey™

Formaldehyde is in EVERY HOME

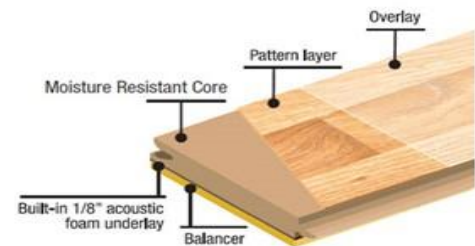

Why

You Should Test Your Air For Formaldehyde with IAQ Home Survey™

Formaldehyde vaporizes from numerous sources and can cause serious health problems. Sources include:

- o Laminate floors
- o Cabinetry
- o Pressed wood products {particle board, plywood paneling, and medium density fiberboard (MDF)}
- o Foam insulation
- o Carpets
- o Drapery fabrics
- o Resins; glues
- o Cigarettes
- o Unvented fuel-burning appliances {gas stoves or kerosene heaters}

HAVE YOUR HOME OR FUTURE HOME FULLY INSPECTED WITH A COST EFFECTIVE FORMALDEHYDE TEST

Indoor air pollution is one risk that you can avoid if you're informed. An IAQ Home Survey™ test can give you peace-of-mind and put you on the path to a healthier home.

A home inspector, a realtor, or the current home owner cannot tell you the level of this toxic compound in the home, only a test can. For total peace of mind that your family will have a healthy home, have a formaldehyde test run. This cost effective test takes only 20 minutes to collect and results are available in 2 days. The EPA states that levels above 100 ppb are a health concern.
