## RecallChek<sup>®</sup>

Home Inspectors and Realtors have an interest in their clients' safety, and in their liability.

Yet, many American Homes have potential and known fire hazards in them. Despite the fact that since 1974, American citizens have been protected from dangerous items in their homes by law.

If a manufacturer has designed a dangerous product, they MUST recall all those items and FIX THEM FOR FREE!

The problem in the law is that most often it's up to you, the consumer, to find out whether your appliances are potential fire or safety hazards!

There's a database online, but you would have to wade through 195 MILLION recalled items to find out if your dishwasher or air conditioner is a potential hazard and this would take a tremendous amount of your time.

As a result, today many of these dangerous appliances are still in homes across America.

### That's why you need a RecallChek!

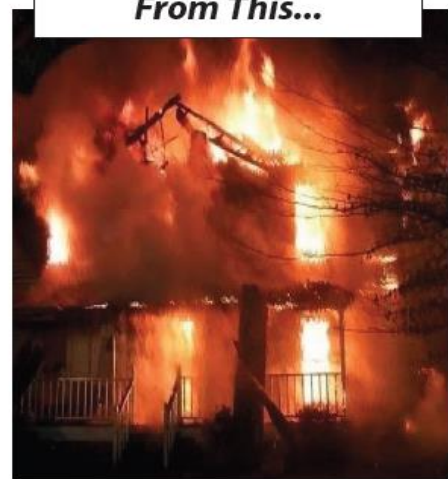

How it works:

- ✓ Your Home Inspector will copy the model numbers of your built-in home appliances and HVAC system.
- ✓ At RecallChek Headquarters, your model numbers are computer matched against MILLIONS of recalls using our Model Number Algorithm (MNA).
- ✓ RecallChek issues a report within 48 hours, to both the inspector and your client
- ✓ In the event of a potential recall, we inform home buyers:
  - 1) the nature of the recall,
  - 2) where the product was sold,
  - 3) how to remedy the defect, and
  - 4) how to get the item repaired or replaced in most cases - **FREE!**

This report is separate from the home inspection, and conducted by RWS Inspector Services Group. The report is completely optional, and sent directly to the home owner from RWS. If the inspector cannot find an appliance's model number, the home owner has the option to send the information to RecallChek<sup>®</sup> directly.

Ensuring Home Owner Safety...  
... while limiting your liability
